PARITY · MCX GOLD FUTURES

Data book

Everything we collect: where it comes from, what each field means, how much there is, how it was checked, and every one of the 712 source files. Data from 20 Nov 2003 to 06 Oct 2026.

55,505
daily rows, one per contract per trading day

711
futures contracts

712
distinct MCX files

6,361
trading days

4
contract types: GOLDM, GOLDTEN, GOLDGUINEA, GOLDPETAL

24
calendar years covered

0
unexplained errors after checks

1
source: MCX's official Bhavcopy

In one line. Every number in Parity starts from the official end-of-day MCX Bhavcopy, downloaded contract by contract, identified by its contents, checked row by row, and converted to ₹ per gram of pure gold so the four contracts can be compared directly. No price was ever edited by hand.

Team SYNTAX TERROR (TAN): Nikhil Kumar, Sai Ganesh, Ishaan Chhabra. Live site: parity-gold-site.vercel.app. Code and data: github.com/nikhilkumar-dev0310/HACKINHILLS-SYNTAXTERROR-TAN-

Generated 08 Oct 2026, 19:53 IST by report/databook.py from the repository's files.

1. Where the data comes from

The only market data source is the **MCX Bhavcopy**, the official daily file the Multi Commodity Exchange of India publishes for every contract: prices, volume, open interest and traded value. We use the commodity-wise view on mcxindia.com (instrument FUTCOM), one download per contract and expiry. There are no paid feeds, no API keys and no third-party prices.

1.1 What we collected

Contract	What it is	Lot	Quoted per	Purity	Contracts	First day	Last day
GOLDM	100 g bar	100 g	10 g	995	271	20 Nov 2003	06 Oct 2026
GOLDTEN	10 g bar	10 g	10 g	999	24	31 Mar 2025	06 Oct 2026
GOLDGUINEA	8 g coin	8 g	8 g	999	225	08 May 2008	06 Oct 2026
GOLDPETAL	1 g	1 g	1 g	999	191	18 Apr 2011	06 Oct 2026

Lot, quote unit and purity are from the MCX contract specification documents for each contract.

1.2 How it was downloaded

- **724 files downloaded** from the Bhavcopy page, by hand for the history and by a headless browser script (tools/auto_fetch.mjs) for the latest contracts.
- **Each file is identified by its contents, not its name.** 12 downloads were exact duplicates and were dropped, leaving **712 distinct files**.
- Those files cover **711 contracts**. One contract (GOLDM expiring 3 Jan 2025) arrived in two downloads with different date ranges; its rows were merged and every row checked for duplicates.
- Dates are read with a fixed format, so day and month cannot swap. Expiry is parsed from the file (for example 04SEP2026) and every row is tied to its own contract; nothing is stitched into a continuous series.
- A scheduled job is built to add each new trading day automatically (tools/daily_update.py). It rejects an update if any already-published price changes.

1.3 Three files, by purpose

The cleaned rows are kept in three files so that the test years could be walled off in code until the rules were frozen.

File	Rows	Contracts	From	To	Purpose
History clean/gold_futures_history.csv	21,511	290	20 Nov 2003	31 Dec 2015	Training years. Rules were built and tuned only on these.
Sealed clean/sealed_rows.csv	21,925	288	01 Jan 2016	09 Oct 2023	Walled off in a separate file until the rules were frozen in Git, then opened once.
Live clean/gold_futures.csv	12,069	150	10 Oct 2023	06 Oct 2026	The working set: development, the 2025-26 holdout and today's market view.
All	**55,505**	**711**	20 Nov 2003	06 Oct 2026	

2. Every field in a row

Each row is one contract on one trading day. The first eleven fields are exactly as MCX publishes them; the last four are added by ingest.py and are reproducible from the others.

Field	Meaning	Unit	Source
`date`	Trading day	date	MCX
`symbol`	Contract type: GOLDM, GOLDTEN, GOLDGUINEA or GOLDPETAL		MCX
`expiry_date`	Last trading day of this contract	date	MCX
`open, high, low`	Day's first, highest and lowest traded price. Blank when the contract did not trade	₹ per quote unit	MCX
`close`	Official settlement (closing) price	₹ per quote unit	MCX
`prev_close`	Previous day's settlement price	₹ per quote unit	MCX
`volume_lots`	Contracts traded that day	lots	MCX
`open_interest_lots`	Contracts still open at the end of the day	lots	MCX
`value_lakhs`	Value traded that day	₹ lakh	MCX
`source_file`	The MCX file this row came from		Parity
`no_trade`	True when volume is zero or no open price was published	true/false	Parity
`rs_per_g`	close ÷ grams per quote ÷ purity: ₹ per gram of pure gold	₹ / pure g	Parity
`days_to_expiry`	Calendar days from date to expiry_date	days	Parity

2.1 Completeness

Field	Blank rows	Why
`date`	0	Never blank
`symbol`	0	Never blank
`expiry_date`	0	Never blank
`open`	3,211	No trade that day: MCX publishes only the settlement price
`high`	3,211	No trade that day: MCX publishes only the settlement price
`low`	3,211	No trade that day: MCX publishes only the settlement price
`close`	0	Never blank
`prev_close`	0	Never blank
`volume_lots`	0	Never blank
`open_interest_lots`	0	Never blank
`value_lakhs`	0	Never blank

3,211 rows (5.8%) are no-trade days. They are kept, marked, and left out of anything that needs a real trade.

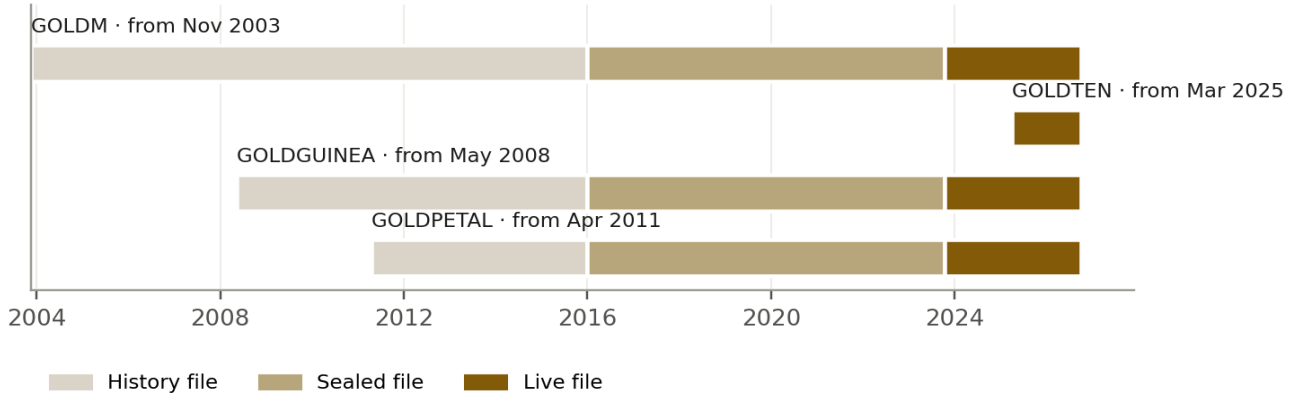

2.2 Three sample rows, one from each file

date	symbol	expiry	open	high	low	close	lots	OI lots	₹/pure g
2008-05-08	GOLDGUINEA	2008-07-31	9,345	9,690	9,345	9,661	22,517	845	1,208.8
2016-01-01	GOLDGUINEA	2016-01-29	20,005	20,087	20,005	20,068	214	2,116	2,511.0
2023-10-10	GOLDGUINEA	2023-10-31	46,577	46,577	46,408	46,470	620	4,422	5,814.6

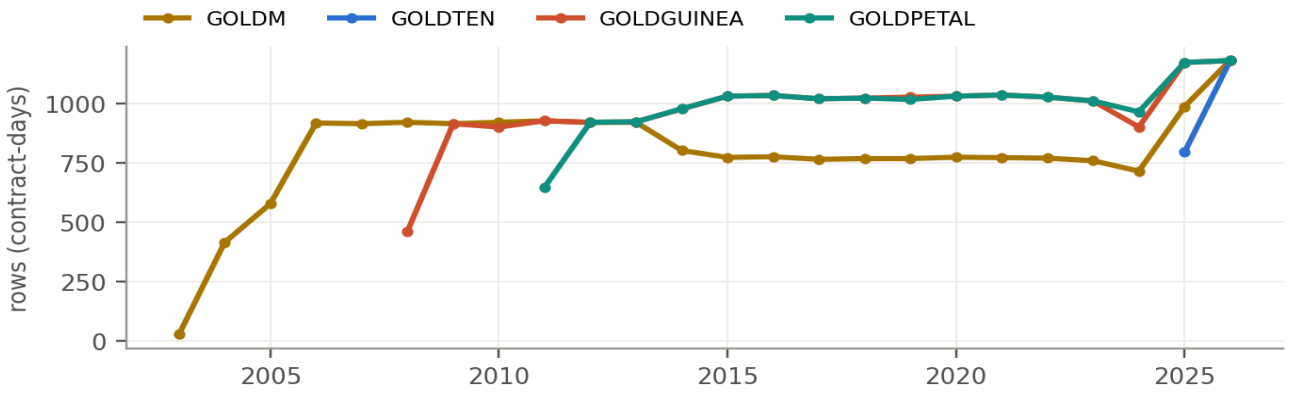

3. How much there is

Contract	Rows	Contracts	Trading days	No-trade rows	Gold traded, total	Value traded, total
GOLDM	18,989	271	6,361	0.6%	19,671,554 kg	₹89.6 lakh crore
GOLDTEN	1,976	24	391	0.2%	143,017 kg	₹2.0 lakh crore
GOLDGUINEA	18,521	225	5,031	12.9%	366,046 kg	₹1.8 lakh crore
GOLDPETAL	16,019	191	4,130	4.5%	295,687 kg	₹2.6 lakh crore
All	**55,505**	**711**	**6,361**	5.8%	20,476,304 kg	₹96.1 lakh crore

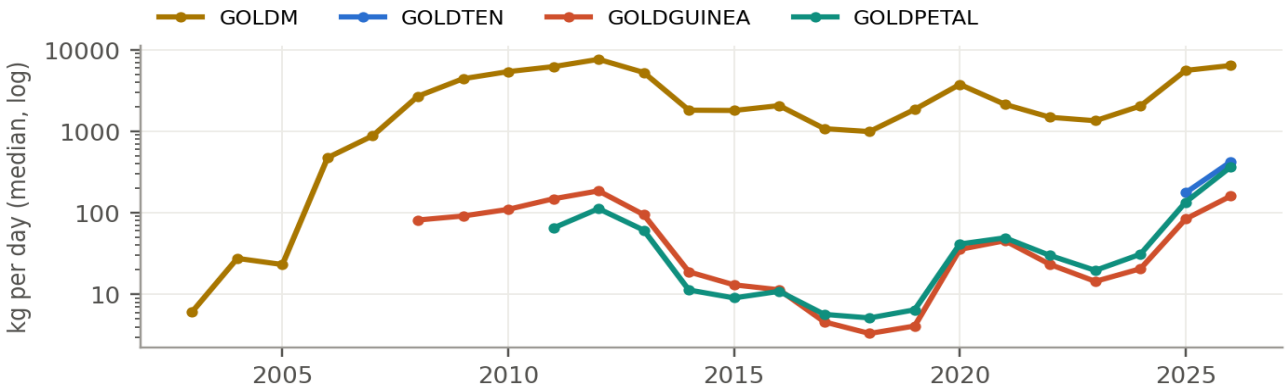

Totals add up every contract's daily volume and value as published in the Bhavcopy.

When each contract type's data starts, and which file holds each period. GOLDTEN was listed by MCX only in 2025.

Rows per calendar year. Rows grow with the number of contracts listed at once.

Median gold traded per day by each contract type (all its contracts summed per day), on a log scale.

Price per gram of pure gold from the most-traded GOLDM contract each day. The other three contracts sit on nearly the same line once converted.

4. How it was checked

Every row of the live file passes these checks before any number on the site is computed (testbed.py). The history and sealed files pass the same structural checks in ingest.py.

Check	Rows checked	Failing	Share
Duplicate (date, symbol, expiry)	12,069	0	0.00%
Row dated after its expiry	12,069	0	0.00%
Open/close outside [low, high]	11,910	0	0.00%
Non-positive price	11,910	0	0.00%
Previous Close != prior row's Close	11,919	148	1.24%
... of which NOT right after a no-trade day	11,919	0	0.00%
Weekend date that is not a known special session	12,069	0	0.00%
Missing trading day inside a contract's life	12,069	0	0.00%
Normalized price >5% from same-cycle median	11,910	11	0.09%

Result: 0 unexplained errors. The 148 previous-close mismatches all follow a no-trade day, where MCX carries a price forward. The 11 rows far from their peers are real prices, mostly in the January 2026 crash, and are kept. No price was changed.

4.1 Official close vs real trades

The settlement price is not a fill. We measured how far it sits from the day's volume-weighted average traded price (VWAP).

Measure	Period	Days	Typical gap	90% of days within
GOLDGUINEA	TRAIN dates	1,355	11.7 bp	42.8 bp
GOLDM	TRAIN dates	1,139	17.6 bp	50.4 bp
GOLDPETAL	TRAIN dates	1,525	13.3 bp	43.8 bp
GOLDTEN	TRAIN dates	63	23.3 bp	86.5 bp
GOLDGUINEA	all dates	3,359	16.8 bp	63.7 bp
GOLDM	all dates	3,043	23.2 bp	78.1 bp
GOLDPETAL	all dates	3,536	17.5 bp	66.5 bp
GOLDTEN	all dates	1,972	26.1 bp	82.7 bp
spread PETAL-TEN	all dates	1,972	7.6 bp	29.8 bp
spread GUINEA-TEN	all dates	1,965	8.5 bp	30.6 bp
spread GUINEA-PETAL	all dates	3,357	6.7 bp	25.5 bp

4.2 Expiry-day settlement

On its last day a contract settles at MCX's Due Date Rate, taken from spot gold, not from futures trades. 261 of 55,505 closes sit outside the day's high-low range; all 261 are on a contract's last trading day. They are kept as published.

4.3 Flagged rows

Flag	Rows	What we did
Far from peers	11	Kept: real prices
Previous close mismatch	148	Left out of signals (price carried forward)

5. What we compute from it

Every analysis writes its results to a file in results/, and one export (dashboard/export.py) turns those files into the site, the report and the pitch. These are derived from the rows above; none of them is new market data.

File	Rows	What it holds
accuracy_carry.csv	4	Precision of every pair gap, carry and per-contract liquidity
accuracy_contracts.csv	4	Precision of every pair gap, carry and per-contract liquidity
accuracy_pair_cycles.csv	198	Precision of every pair gap, carry and per-contract liquidity
accuracy_pairs.csv	12	Precision of every pair gap, carry and per-contract liquidity
alerts_baseline.csv	2	Alert episodes and what each gap did next
alerts_history.csv	66	Alert episodes and what each gap did next
alerts_summary.csv	4	Alert episodes and what each gap did next
attribution_summary.csv	4	Each trade's profit split into gap and gold's own move
attribution_trades.csv	195	Each trade's profit split into gap and gold's own move
curve_slope_daily.csv	2,403	Futures curve slope, daily and monthly
curve_slope_monthly.csv	36	Futures curve slope, daily and monthly
fairvalue_dev.csv	9	Strategy B (fair price off GOLDM): settings, development and holdout trades
fairvalue_dev_trades.csv	81	Strategy B (fair price off GOLDM): settings, development and holdout trades
fairvalue_holdout_trades.csv	36	Strategy B (fair price off GOLDM): settings, development and holdout trades
holdout_trades.csv	468	Strategy A sealed holdout trades
lifecycle_contracts.csv	150	Contract calendar, liquidity by days to expiry, tender checks
lifecycle_liquidity.csv	32	Contract calendar, liquidity by days to expiry, tender checks
lifecycle_summary.csv	4	Contract calendar, liquidity by days to expiry, tender checks
lifecycle_trades.csv	195	Contract calendar, liquidity by days to expiry, tender checks
methods_train.csv	27	Alternative pair methods tried on training data
methods_train_trades.csv	201	Alternative pair methods tried on training data
rolldown_monthly.csv	124	Monthly price change split into roll-down and curve move
rolldown_summary.csv	4	Monthly price change split into roll-down and curve move
sealed_summary.csv	18	2016-2023 sealed tests: summary and every trade
sealed_trades.csv	930	2016-2023 sealed tests: summary and every trade
spread_levels.csv	22	Pair gap level and spread by contract cycle
strategy_b_dev_alldata_trades.csv	216	Strategy B over all development data
strategy_c_dev_grid.csv	72	Strategy C: setting grid, walk-forward, trades
strategy_c_dev_trades.csv	162	Strategy C: setting grid, walk-forward, trades
strategy_c_walkforward.csv	9	Strategy C: setting grid, walk-forward, trades
test_bootstrap.csv	3	Strategy A first sealed test and its bootstrap range
test_trades.csv	57	Strategy A first sealed test and its bootstrap range
testbed_close_vs_vwap.csv	11	Data checks, close vs VWAP, margins of error
testbed_integrity.csv	9	Data checks, close vs VWAP, margins of error
testbed_margins.csv	6	Data checks, close vs VWAP, margins of error
train_sweep.csv	27	Strategy A training sweep and trades
train_trades.csv	366	Strategy A training sweep and trades
update_log.csv	1	

File	Rows	What it holds
fairvalue_params.json	–	Strategy B (fair price off GOLDM): settings, development and holdout trades
frozen_params.json	–	Strategy A rules, frozen before testing
method_choice.json	–	Which method was promoted, and why
overfit.json	–	
sealed_run_done.json	–	2016-2023 sealed tests: summary and every trade
strategy_c_params.json	–	Strategy C: setting grid, walk-forward, trades

5.1 Where to get the full rows

- **Every row:** clean/gold_futures.csv, clean/gold_futures_history.csv and clean/sealed_rows.csv in the repository (CSV, opens in Excel).
- **The original MCX files:** raw_clean/, exactly as downloaded.
- **On the site:** Overview → Download the data (latest day, daily price per pure gram, daily premium, trades, alerts) and Data quality → Download log (the file list in Appendix A as CSV).
- **Rebuild everything:** python ingest.py, then the scripts listed in README.md.

Appendix A. Every contract and source file (711 contracts, 712 files)

One line per contract, newest expiry first within each contract type. Dates are year-month-day. Rows: trading days held. Kg/d: median gold traded on its trading days. File: where the rows sit (H = history, S = sealed, L = live).

GOLDM · 100 g bar · 271 contracts

Expiry	First	Last	Rows	Kg/d	File	Expiry	First	Last	Rows	Kg/d	File
